General Counsel
California Department of Insurance
45 Fremont Street, 23rd Floor
San Francisco, CA 94105

Re: Review of Revised Anthem Rate Filing for 2010

Dear Adam:

We are pleased to submit this report of our review of the revised 2010 Anthem Blue Cross rate filing for its Individual Health Insurance business submitted to the California Department of Insurance (Department). As General Counsel for the Department, you have requested that we thoroughly review this revised Anthem filing as to its compliance with the Department's 70% minimum lifetime loss ratio (LLR) requirements.

Similar to the original rate filing, the revised filing has submitted rate increase requests for 8 different policy forms or plans. This report incorporates our original report which this letter report supplements. The review performed for these revised rate filings takes our findings and conclusions from the original report ("Review of Anthem Blue Cross 2010 Rate Increases") as its starting point and validates the work performed by Anthem for these filings in light of our original findings, conclusions and recommendations. Additionally, while some of the key assumptions used in the re-filed LLR projections have been updated, other assumptions are unchanged from the original filing and only required limited testing, as discussed below.

Executive Summary

Our key findings are:

- **Anthem has reduced their requested rate increase from initial levels to below recommended levels in our prior report:** Table 1 shows the originally requested rate increases by policy form grouping compared to both the "AHP corrected rate increases" using "AHP best estimate

assumptions” as shown in our original report and the current rate increases requested by Anthem in their revised filing.

Note that the weighted average rate increase of the AHP best estimate in our review of the original rate filing was 14.5% and that this new filing requests a lower weighted average rate increase of 13.5%. Thus, the aggregate increase is lower despite the six-month delay in the effective date of these rate increase requests from March 1, 2010 to September 1, 2010.

Plan Name	Original Rate Filing Anthem Requested Increase	Original Rate Filing Review AHP Best Estimate Increase	New Rate Filing Anthem Requested Increase
SmartSense	22.8%	5.8%	14.7%
Share	32.0%	21.9%	14.1%
Saver	16.3%	4.0%	13.1%
3500	16.6%	6.6%	10.1%
Right	29.1%	23.2%	13.8%
Tonik	29.5%	23.8%	14.5%
CDHP Mat	32.7%	22.6%	15.3%
CDHP No Mat	12.3%	2.1%	12.5%
Overall Average	25.4%	14.5%	13.5%

- Anthem rates meet and/or exceed the 70% lifetime loss ratio requirement:** In order for these rate increases to comply with California Code of Regulations 2222.12 (the California Code), it is necessary that the anticipated Lifetime Loss Ratios (LLRs) be at or above 70% for each appropriate policy form grouping. Table 2 compares the originally filed LLRs to those in the revised filing. All LLRs are in excess of 70%. Note that each of the new LLRs, except for the SmartSense plans, is significantly higher than the projected LLR in the original filings. In total, the combined LLR for all plans has increased by more than 5 percentage points from 76.4% to 81.7%.

While not shown in the table below, the average future LLR has also increased from the original 79.8% to 89.1%, as has the average historical cumulative loss ratio for these plans from 69.5% to 71.9%. This latter loss

ratio is noteworthy, since it is now estimated that Anthem's cumulative historical loss ratio [which includes all months of experience through Aug-2010] on its entire block of individual health insurance is now estimated to be above 70% also. For reference, the summarized original and re-filed LLR's by individual plan are shown in Exhibit 1, along with other comparative data.

Table 2 Comparison of Original to New Lifetime Loss Ratios		
Plan Name	Original LLR	New LLR
SmartSense	75.2%	73.6%
Share	72.8%	82.8%
Saver	76.1%	79.4%
3500	79.8%	86.6%
Right	73.8%	77.1%
Tonik	72.0%	77.9%
CDHP Mat	144.8%	159.1%
CDHP No Mat	78.9%	91.0%
Overall Average	76.4%	81.7%

- Anthem projected lifetime loss ratio calculations are reasonable:** In order to validate the appropriateness of these new Lifetime Loss Ratio projections, it was necessary to analyze the data, assumptions and projections for the revised filings to ensure that these were reasonable in light of their counterparts in the original filings. Our analyses included independent calculations of the experience-based trend assumptions and projected lifetime loss ratios (historical, future and total), which resulted in LLR projections that were substantially equal to Anthem's LLR projections (see details by plan in Exhibit 5 attached). Table 3 below summarizes Exhibit 5 using the composite LLRs for all plans combined and shows that our independent calculations of the LLR projections are virtually equal to those in the revised Anthem filing. In addition, the detail of all our independent LLR projections by plan are shown in the eight (8) projection summaries of Appendix A.

Table 3 also shows our projected high and low LLR estimates. Our high and low scenarios used ranges for:

- The underwriting wear-off and selection factors (i.e., claims duration to premium duration factors)

- Claims trends applicable to the starting claims level and for projecting forward through 2010 and
- Monthly lapse rates (see AHP Low & High assumptions summarized in Exhibit 4).

Our ranges for these assumptions were generally consistent with the ranges used in our original report, except that the starting trend assumptions needed to incorporate the additional claims experience included in the re-filed projections. The Anthem LLRs are comfortably within the range of reasonableness as shown in the table.

Table 3			
Summary of Re-filed LLRs Anthem vs. AHP Independent Estimates			
	Historical LLR	Future LLR	Total LLR
Anthem	71.9%	89.1%	81.7%
AHP	71.8%	89.0%	81.7%
AHP "Low"	71.4%	82.8%	77.6%
AHP "High"	71.9%	91.5%	83.9%

Our review also confirmed that the data and assumptions used in the LLR projections and supporting analyses (e.g., trend analyses, etc.) were consistent with the comparable data and assumptions used in the original filing and that Anthem had corrected the previous errors identified in our original report.

We therefore agree that the revised Anthem filing meets the requirements of the California Code with regard to the 70% minimum lifetime loss ratio for both future years and for the total lifetime of each policy form grouping.

The following sections of this report summarize the analyses performed to develop the results summarized in the above tables, as well as the validation of the appropriateness of the data, assumptions and projections used by Anthem for this revised rate filing.

Updated Claims Trend Experience

The original rate filing had indicated that the annualized leveraged trend rate for the 24-month period ended at 8/31/2009 for the eight policy form groupings was 19.8% on average. However, our review using Anthem's data corrected this average trend to 16.7%. The claims data for this experience period used claims

incurred through 8/31/2009 and paid through 9/30/2009 and therefore used a fairly significant adjustment for the additional claims run-out still expected after September 30. With the actual additional run-out now available through 3/2010, the actual trend result for the same incurred experience period is now calculated to be at 17.2%, slightly higher than the previous AHP estimate.

The new filing used more recent claims experience to update trend assumptions, testing three different "incurred through" dates (8/09, 12/09 and 2/10) but with claims payments for all three through 3/31/2010. The composite trends for these three "incurred through" dates were 17.2%, 20.8% and 22.7%, respectively. Based on this more recent emerging experience, all three claims trend rates were higher than the corrected trend we had calculated (16.7%) for the original filing. The trend rates by policy form are shown in the attached Exhibit 2. The exhibit also summarizes AHP's calculated trend rates, which were developed independently in order to validate Anthem's trend numbers and resulted in very consistent results.

For reference, the 8 tables in Appendix B show our independent trend validation calculations for each plan in detail. Specifically, the tables in Appendix B show the detail of the month-by-month progression in the 12-month and 6-month rolling average of the historical claims trend for each plan. In general the significant trend increases started in about mid-2009 and have continued into the first two months of 2010. Also, it is noted that this increase is in the normalized trend rate, which is the underlying trend after already adjusting for the increase in claims caused by aging, underwriting wear-off and any plan-mix changes.

The 2009 and 2010 boxed results shown in the lower right quadrant of Exhibit 1 shows how these recent high trend rates have caused a significant increase in the projected loss ratios for 2010 in comparison to the 2009 loss ratios in the lower third of this exhibit (73.6% in 2009 vs. 82.8% in 2010 per the revised filings on a composite basis). The effect is also exacerbated by the fact that rate increases have been deferred in 2010. This effect can be seen by comparing the original filings corrected results in the 2010 columns (in the middle of Exhibit 1) to the results shown for the new filings in the lower third of the exhibit. That is, the expected composite premium revenue for 2010 for the revised filings is \$168.41 pmpm compared to a previous expectation in the original filings of \$199.52 pmpm in the originally filed rate increases with no premium deferral.

Anthem elected to base claims trends from the 12/09 "incurred through" dates claims experience for their LLR projections. However, before applying these

trend factors in the projections, they were reduced somewhat from a composite of 20.8% to 20%, which is at the midpoint between the two extremes, 17.2% and 22.7%, and reasonably close to the 12/09 estimated average trend (see Exhibit 2).

While these trend rates are outside of our original “low to high” reasonability range (see the top of Exhibit 4), we agree that it is appropriate to use these higher rates to project the average 2009 pmpm claims experience forward through the end of 2009 to the expected claims level for Jan-2010 (the “starting month”). As Appendix B demonstrates, the claims trends through much of 2009 and into early 2010 actually experienced such higher trend rates. Therefore, as shown in Exhibit 3, Anthem’s “starting” composite trend assumption falls within our range for the starting trends to Jan-2010. Even though Anthem’s trend assumption then applicable during 2010 as derived directly from their experience is higher than our range for 2010 trends this short-term spike in trends within the LLR projections does not bias the ultimate LLR projections to any material degree. Finally, consistent with the prior filing, Anthem further reduced the assumed claims trend applicable to 2011 and later years in the LLR projections to 8% (same as the assumed premium rate increase assumption in 2013 and later)

Durational Relativity Factors for Premium and Claims

Similar to the approach used in Anthem’s original filing, the LLR projections incorporate premium and claims duration factors which account for additional trends caused by the aging of members and the wearing off of underwriting and selection, respectively. The bottom of Exhibit 4 shows the three distinct sets of “claims to premium relativity factors by duration” implicitly used by Anthem for the revised filings. Note that Anthem’s relativity factors are generally within the AHP acceptable “low to high” range from our original report.

These factors for the revised rate filings are virtually the same as those in the original Anthem filings, which were derived directly from Anthem experience. The only change occurred for the duration 11 and later premium and claims duration factors, which were now set equal to the duration 10 factors. Previously, there had been a significant spike upward in the duration 11+ factors in the original filings. This change (eliminating the spike) had been recommended in our original report. This of course lowered the claims to premium ratios for durations 11 and later.

Member Months, Claims Expenses and Premium Revenue by Month

Exhibit 3 summarizes our independent verification of the starting per member per month (pmpm) claims costs for the incurred month of Jan-2010, which are used as the starting point to project future claims costs in the LLR projections. It is noted that we validated via independent calculations as summarized in this exhibit that Anthem implemented the corrections for the starting pmpm claims calculations as outlined in our original report (to incorporate into the starting pmpm claims cost the known components of trend for risk factors of plan mix, measured claims index factors, etc.) The Anthem and AHP starting costs are projected with consistent results.

Appendix C shows the results of our test of the consistency of the historical member months, claims expenses and premium revenues by month. These tests indicated no material difference between the historical data used in both the original filings and the new revised rate filings. Differences in data appear reasonable relative to normal restatements that can occur in reported monthly data for recent months and/or would not be material in terms of impacting the minimum LLR requirements.

We also performed other tests of the data, including validating the consistency of data used in the claims trend analyses versus the LLR projection models (these reconcile after adjusting for the inclusion of "Block C" data in trend analysis to increase the credibility of measured trends) along with other tests that we deemed necessary.

Premium Increase Assumptions In Future Years

In addition to revising the requested 2010 premium rate increases, now deferred to 9/1/10 (or 10/1) as discussed above, the re-filed LLR projections also include an updated premium rate increase assumption for the next two rate increases occurring in 2011 and 2012. Updated premium rate increases are shown in Exhibit 1 as 10% instead of 8% for 3/1/11 and 3/1/12.

Also, as noted in the re-filed actuarial memoranda, it is currently assumed that members' renewal dates in 2011 will be adjusted back to their original renewal month (i.e., rather than occurring in Oct-2011), with the 2011 and later rate increases to occur in such renewal month. This was incorporated into the LLR projections, which we validated.

Validation of Other Assumptions

Our testing and validation of other assumptions included the following:

- **Deductible Leveraging Factors** – The factors used in the revised rate filing are consistent with those used in Anthem’s original rate filing, which had already been validated; no further testing beyond our original analysis was found to be necessary
- **Lapse Rates** – Anthem’s lapse rates in the re-filings were consistent with their original filings, which were based on actual Anthem lapse experience. As noted above, we also performed sensitivity testing to isolate the impact of this assumption, which is included in our alternate Low/High scenarios shown in Exhibit 5.
- **Discount Rate** – Unchanged from original filing,
- **Renewal Distribution assumptions** – These were updated to reflect more recent experience and the continued transition from the former focal renewal data of March-1 to policy anniversary for new sales, and the 2010 adjusted distribution to reflect the deferral of rate increases from March-2010 to Sept/Oct 2010. Based on our testing of the 2010 and 2011 distributions these assumptions appeared reasonable. These assumptions were factored into our independent calculations of projected premium revenue in our LLR projections, with consistent results relative to Anthem’s.
- **Claims Seasonality** – i.e., to reflect the impact of calendar year deductibles, which result in lower claims levels at the beginning of each calendar year and higher claims levels later in the year as deductibles are met. We reviewed Anthem’s calculated seasonality factors and found them to be reasonable and generally consistent with our prior estimates, although slightly steeper based on Anthem’s updated study using 2009 claims with run-out through Mar-2010. We also tested the use of these seasonality factors into Anthem’s re-filed LLRs and had consistent results to Anthem’s. Additionally, given the increase in measured trends in recent months, our independent trend calculations separately tested the impact on measured trends of normalizing for seasonality versus not doing so (Anthem’s trend analysis did not, under the assumption that seasonality is essentially neutralized under the rolling average approach used). Results varied slightly by plan, but the composite trends were not materially different.
- **New Sales** – Assumptions were updated and appeared reasonable relative to originally filed assumptions. Also, it is noted that projected members from new sales are now included through August-2011 in line

John F. Fritz, FSA, MAAA
August 21, 2010
Page 9 of 9

with the updated projection date, whereas the originally filed LLR projections included new sales through only Feb-2011.

Summary

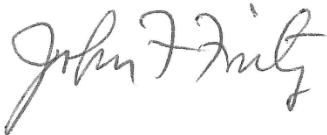

In summary, we find that the revised Anthem rate filings comply with the minimum 70% total lifetime loss ratio and future lifetime loss ratio requirements. These filings have corrected the errors discussed in our original report and incorporated other suggestions made in that report. We have validated that Anthem has used data and assumptions consistent with their original rate filings and has performed the lifetime loss ratio projections with appropriate corrections in a consistent manner for the revised filings.

The various detailed Exhibits and Appendices referenced in this report are included as attachments to this report.

We appreciate the cooperation of both the Department and Anthem Blue Cross, who responded quickly to our requests for additional information. We trust that this report will meet the Department's needs for the review and approval process of the revised 2010 Anthem Blue Cross rate filings.

We look forward to any questions or comments you may have regarding this report.

Sincerely,

John F. Fritz, FSA, MAAA, FCA

(Underlying Medical Trend, before Deductible-Leveraging)

Relatively minor differences between AHP and Anthem estimates are attributed to different approaches used for normalizing underlying PMPM claims used to determine measured trends.

Product-Specific (Leveraged) Starting Trend (Annual)		Orig Filing Starting Trends to 9/09 **	Re-Filed Starting Trends from CY2009 to 1/2010

U/L Trend:			17.5%	14.0%	19.5%

<< High scenario assumes measured 2009 actual/unsmoothed trend continues through 9/09

NOTES:
 1- Original Trend is the trend used in the Lifetime Loss Ratio calculation from the original rate filing.
 2- Axene Corrected Trend is the Original Trend but with the changes described in the Executive Summary of the Axene Health Partners report
 3- Updated Trend is the trend based on more recent experience, including Clms Pd through 3/10
 * The measured U/L trends are based on annual change in rolling 12-mo avg pmpms, except that for SmartSense & CDHP-NonMat the initial trend study per Inc'd through 8/09 used a rolling 6-mo avg pmpm due to limited experience.
 ** Orig starting trends applied to base exper (5/08-6/09) to proj 9/09, which were total trends inclusive of ClmsDur & Plan-Mix, are shown here as annualized trends excluding ClmsDur & F

															Dent/Vis: Total Lifetime	\$54,285	\$27,997		51.6%
															Med+Dent/Vis: Total Lifetime	\$665,747	\$516,065		77.5%

Notes:

* For historical claims prior to 2010, excludes Manual Adj to claims (non-system claims). For Jan-2010 & later claims, the manual adj. for non-system clms is included.

** For Tonik, the LLR projection detail shown here is Med-only, before addition of Dent/Vision claims. The final LLR (see bottom row) is for Med+Dent/Vision, consistent w/ AHP's estimate
