

California Department of Insurance

**INSURER CLIMATE RISK DISCLOSURE SURVEY
For Calendar Year 2010**

Due Date: May 1, 2011

Instructions:

- i. **Insurers are required to submit the *Climate Risk Disclosure Survey* to the domestic regulator by May 1 each year.** Surveys are intended to be submitted to the domestic regulator of insurer group's lead state (i.e. the regulator overseeing the insurer within the group that reports the largest direct written premium volume.)
- ii. Narrative responses are acceptable. Where an insurer's response to other disclosure mechanisms, such as the Carbon Disclosure Project (CDP) or Global Reporting Initiative, explicitly addresses the subject matter of a question in this survey, the insurer may reference and attach their most recent response to that external mechanism in lieu of providing a duplicative response.
- iii. Insurers are required to answer all questions in good faith and with meaningful responses. However, there is no requirement to provide information that is immaterial to an assessment of financial soundness (insurers may choose to disclose such information voluntarily, with no implication that such information is in fact material).
- iv. Insurers are **not** required to provide quantitative information, provide information that they in good faith believe is commercially sensitive or proprietary, or provide forward-looking information. If an insurer chooses to provide forward-looking information, the insurer may disclaim any responsibility for the accuracy of such forward-looking information. Provided the insurer supplies such information in good faith, it may condition its response with a waiver of any claim under any theory of law based on the inaccuracy of such information.

California Department of Insurance

**INSURER CLIMATE RISK DISCLOSURE SURVEY
For Calendar Year 2010**

Due Date: May 1, 2011

Company Name:	Blue Shield of California Life & Health Insurance Company				
NAIC No.	61557	NAIC Group No.	2798	Domiciled State:	CA
CA Direct Premiums Written	\$1,343,836,233		Nationwide Direct Premiums Written	\$1,343,836,233	

<u>Survey Questions</u>	<u>Comparable CDP Questions</u>
<p>1. Does the company have a plan to assess, reduce or mitigate its emissions in its operations or organizations? If yes, please summarize.</p> <p>Answer:</p> <p>Yes. Blue Shield of California Life & Health Insurance Company (Blue Shield Life) is a wholly-owned subsidiary of California Physicians' Service, dba Blue Shield of California (Blue Shield). Blue Shield has completed a third-party-reviewed greenhouse gas emissions inventory, developed according to the WBCSD/WRI GHG Protocol, annually since 2008.</p> <p>Energy is more than 90% of Blue Shield's footprint. Blue Shield primarily focuses on energy efficiency to reduce emissions from its operations, including its data center. We pursue LEED- and Energy Star-certification for office buildings. In 2010, our 20-acre Lodi, California campus received LEED certification; and other owned sites in El Dorado Hills and Redding, California, won Energy Star designation. Additionally, many of our leased offices are in LEED- or Energy Star-certified buildings, including our San Francisco, California headquarters. Energy efficiency measures also include lighting upgrades with all renovations, data center efficiency improvements, the use of lighting sensors and purchasing only Energy Star- and EPEAT-certified computing equipment.</p> <p>Although not part of our greenhouse gas inventory, Blue Shield also supports reducing the impact of business travel and employee commuting. Videoconferencing is extensively used to connect remote sites for meetings and commuter benefits, rideshare matching and bike-to-work support are available.</p>	<p>Performance Question 21</p>
<p>2. Does the company have a climate change policy with respect to risk management and investment management? If yes, please summarize. If no, how do you account for climate change in your risk management?</p>	

California Department of Insurance

<p><u>Answer:</u></p> <p>Blue Shield does not currently have a climate change policy with respect to risk management and investment management.</p>	
<p>3. Describe your company’s process for identifying climate change-related risks and assessing the degree that they could affect your business, including financial implications.</p> <p><u>Answer:</u></p> <p>Blue Shield does not currently have a process for identifying climate change-related risks and assessing the degree that they could affect our business, including financial implications.</p>	<p>Risks and Opportunities Questions 1-3</p>
<p>4. Summarize the current or anticipated risks that climate change poses to your company. Explain the ways that these risks could affect your business. Include identification of the geographical areas affected by these risks.</p> <p><u>Answer:</u></p> <p>. Among the potential risks that climate change poses to our company are:</p> <ul style="list-style-type: none"> • The impact to utility costs under a carbon-capped economy • The availability of incentives and cost-effective technologies for energy efficiency and renewable energy (potentially offsetting higher utility costs) • Whether emission caps will impact air pollution, potentially reducing the prevalence or severity of conditions affected by pollution levels such as asthma <p>Blue Shield is taking an active public stance on the connection between climate change and public health. In 2010, we were the first health plan in California to join the successful No on 23 coalition to preserve California’s climate change law and joined the board of the Business Council on Climate Change. We also joined more than 30 other health organizations in publicly opposing Prop 23. In 2011, Blue Shield is serving on the business advisory panel to the City of San Francisco’s Climate Action Plan, advising on health/business impacts of proposed climate change mitigation initiatives.</p> <p>In 2010 and 2011, we sponsored Bike to Work Day and Sunday Streets events in San Francisco, which reduce car travel and put tens of thousands of people onto bikes and walking, biking, running and playing on city streets closed to traffic. Blue Shield</p>	<p>Risks and Opportunities Questions 1-3</p>

California Department of Insurance

also continues to assess incentives and financing available for renewable energy options for our own operations.

Geographic risks. Blue Shield and its subsidiaries are located in California. Geographic risks associated with climate change include the possibility for greater frequency, duration and severity of weather events, which could affect both our customers' health and Blue Shield's operational ability.

Blue Shield has an extensive Business Continuity program in place to minimize the impact of such an interruption to the company's critical business functions, even if we are not operating in normal mode. In several instances of extreme weather events in [2007](#) and 2008 ([January](#) and [July](#)), Blue Shield implemented emergency responses to assist customers in the path of wildfires and severe storms.

<p>5. Has the company considered the impact of climate change on its investment portfolio? Has it altered its investment strategy in response to these considerations? If so, please summarize steps you have taken.</p> <p><u>Answer:</u></p> <p>No.</p>	<p align="center">Risks and Opportunities Question 3: "Other Risks" Question 6: "Other Opportunities"</p>
<p>6. Summarize steps the company has taken to encourage policyholders to reduce the losses caused by climate change-influenced events.</p> <p><u>Answer:</u></p> <p>Our Business Continuity program focuses on minimizing the disruption to critical business functions and customers from events such as, potentially, climate change-influenced severe weather. See Question #4 for more detail on this program.</p>	<p align="center">Risks and Opportunities Questions 4-6</p>
<p>7. Discuss steps, if any, the company has taken to engage key constituencies on the topic of climate change.</p> <p><u>Answer:</u></p> <p>Blue Shield actively engages numerous constituencies on the topic of environmental responsibility, including climate change. In 2009, the company enhanced its commitment to environmental responsibility by launching a green program, team and internal website to more fully involve and communicate with employees. As mentioned above, Blue Shield joined the board of the Business Council on Climate Change, advisory panel for the City of San Francisco Climate Action Plan, and the No on 23 coalition to externally demonstrate commitment. Blue Shield is reducing our paper impact by increasing customer communications available online and choosing environmentally-friendly paper and design options. Our efforts resulted in the reduction of paper in printed communications by 45% in 2010 over 2009 and a savings of more than 7 million lbs. of greenhouse gases. Transitioning customers to paperless options involves communications that emphasize our environmental commitment.</p>	<p align="center">Governance Questions 24, 26, 27</p>

Climate Risk Disclosure Survey Guidance**Discussion**

This document offers guidance to insurers responding to the annual mandatory Insurer Climate Risk Disclosure Survey (hereafter referred to as the “Survey”). Those questions contained in this guidance document which are not part of the official set of Survey questions are intended only to guide respondents as they craft their responses to the Survey and are not compulsory.

Guidance Notes**Survey Application and Instructions****i. Response Submissions**

Mandatory disclosure will depend on the premium amounts reported for the most immediate prior financial reporting year. If an insurance group reports over **\$300,000,000** for **2010**, it must complete the survey and submit it to its domestic regulator on or before **May 1, 2011**. However, if an insurance group reports less than that, it will not be required to complete and file the survey, but it may do so voluntarily.

ii. Quantitative and Forward-Looking Information

Insurers are not required to submit quantitative information but may do so without implying materiality. Insurers are encouraged to provide quantitative information where it offers additional clarity on trends in the intensity or attenuation of natural hazards, insured losses, investment portfolio composition, policyholder risk reduction or improvements in computer modeling. As climate science improves (i.e. when there is greater agreement between observed data and models or when there is integration of catastrophe and climate models), insurers should be able to provide quantitative information with less uncertainty.

Insurers are encouraged but not required to provide forward-looking information that will indicate the risks and opportunities insurers may face in the future; when provided, insurers may disclaim any responsibility for the accuracy of such forward-looking information. Forward-looking information is assumed to have some degree of uncertainty; if provided, insurers should offer explanation on the degree and sources of uncertainty as well as assumptions employed.

iii. Response Required

Insurers in all segments of the industry are required to respond to all eight questions. An insurer may state that a question is not relevant to its business practice, operations or investments. However, if it does so, it must also explain why the question is not relevant.

Survey Questions

California Department of Insurance

Question One: Does the company have a plan to assess, reduce or mitigate its emissions in its operations or organizations? If yes, please summarize.

Insurers who are unfamiliar with frameworks for greenhouse gas emission measurement and management are encouraged to review the principles of “The Greenhouse Gas Protocol: A Corporate Accounting and Reporting Standard (Revised Edition)” developed by the World Resources Institute and the World Business Council for Sustainable Development (“the GHG Protocol”).

Each insurer is encouraged to clarify whether its plan for measuring and management of its emissions in operations and/or its subsidiary organizations’ operations includes emissions related to energy use for data storage or other computing-intensive processes.¹

Question Two: Does the company have a climate change policy with respect to risk management and investment management? If yes, please summarize. If no, how do you account for climate change in your risk management?

Questions to consider include:

- Where in the structure of the company is climate risk addressed?
- Does the company approach climate change as an Enterprise Risk Management (ERM) issue?
- Does the company have a dedicated point-person or team within the company that is responsible for managing its climate change strategy?
- What is the role of the board of directors in governing climate risk management?
- Does the company consider potentially correlated risks affecting asset management and underwriting?
- Has the company issued a public statement on its climate policy?

Question Three: Describe your company’s process for identifying climate change related risks and assessing the degree that they could affect your business, including financial implications.

Questions to consider include:

- How may climate change shift customer demand for products?
- What implications may climate change have on liquidity and capital needs?
- How might climate change affect limits, cost and terms of catastrophe reinsurance, including reinstatement provisions?
- Has the insurer considered creative methods of risk distribution such as contingency plans to reduce financial leverage and resolve any liquidity issues in the event of a sudden loss in surplus and cash outflows as a result of a catastrophic event?
- How are these impacts likely to evolve over time? Does the company have plans to regularly reassess climate change related risks and its responses to those risks?

¹Data centers consume more energy than any other area of an organization because they contain both IT equipment and the infrastructure that is needed to cool that equipment. The Environmental Protection Agency found that data centers consumed about 60 billion kilowatt-hours (kWh) in 2006, roughly 1.5 percent of total U.S. electricity consumption. Nancy Faig, Insurance & Technology “The Greening of Data Centers” Mar 07, 2008 URL: <http://www.insurancetech.com/showArticle.jhtml?articleID=206902492>.

California Department of Insurance

Question Four: Summarize the current or anticipated risks that climate change poses to your company. Explain the ways that these risks could affect your business. Include identification of the geographical areas affected by risks.

Questions to consider include:

- Which business segments or products are most exposed to climate-related risks?
- Has the company considered its potential exposure to climate liability through its D&O or CGL policies?
- Are there geographic locations, perils or coverages for which the company has increased rates, limited sales, or limited or eliminated coverages because of catastrophic events? How do those actions relate to assessments of climate change impacts made by the company?
- Has the company examined the geographic spread of property exposures relative to the expected impacts of climate change, including a review of the controls in place to assure that the insurer is adequately addressing its net exposure to catastrophic risk?

Question Five: Has the company considered the impact of climate change on its investment portfolio? Has it altered its investment strategy in response to these considerations? If so, please summarize steps you have taken.

Questions to consider include:

- Does the company consider regulatory, physical, litigation, and competitiveness-related climate risks, among others, when assessing investments?
- Has the company considered the implications of climate change for all of its investment classes, e.g. equities, fixed income, infrastructure, real estate?
- Does the insurer use a shadow price for carbon when considering investments in heavy emitting industries in markets where carbon is either currently regulated or is likely to be regulated in the future?
- Does the insurer factor the physical risks of climate change (water scarcity, extreme events, weather variability) into security analysis or portfolio construction? If so, for what asset classes and issuers (corporate, sovereign, municipal)?
- How does climate change rank compared to other risk drivers, given the insurer's asset liability matching strategy and investment duration?
- Does the insurer have a system in place to manage correlated climate risks between its underwriting and investments?

Question Six: Summarize steps the company has taken to encourage policyholders to reduce the losses caused by climate change-influenced events.

Questions to consider include:

- How has the company employed price incentives, new products or financial assistance to promote policyholder loss mitigation? In what lines have these efforts been attempted, and can the outcome of such efforts be quantified in terms of properties retrofitted, losses avoided, etc.?

California Department of Insurance

- For insurers underwriting D&O, CGL and professional liability policies, what steps has the company taken to educate clients on climate liability risks or to screen potential policyholders based on climate liability risk? How does the company define climate risk for these lines?

Question Seven: Discuss steps, if any, the company has taken to engage key constituencies on the topic of climate change.

Questions to consider include:

- How has the company supported improved research and/or risk analysis on the impacts of climate change?
- What resources has it invested to improve climate awareness among its customers in regulated and unregulated lines?
- What steps has it taken to educate shareholders on potential climate change risks the company faces?

Question Eight: Describe actions your company is taking to manage the risks climate change poses to your business including, in general terms, the use of computer modeling.

Questions to consider include:

- For what perils does the company believe that future trends may deviate substantially from historical trends due to changes in the hazard? Similarly, for what perils, if any, does the company believe that a catastrophe model extrapolating observed trends would be insufficient to plan for maximum possible loss or yearly average loss? What steps has the company taken to model or analyze perils associated with non-stationary hazards?
- Has the company used catastrophe models to conduct hypothetical “stress tests” to determine the implications of a wide range of plausible climate change scenarios? If so, over what timescale, in what geographies and for what perils?
- Has the company conducted, commissioned or participated in scenario modeling for climate trends beyond the 1-5 year timescale? If so, what conclusions did the company reach on the potential implications for insurability under these scenarios?

California Department of Insurance

Climate Change Resources for Insurers

There are many publications and websites that can provide insurers with a useful overview of the potential impacts of climate change on the insurance sector. The following resource list is not comprehensive but offers a good starting point for insurers seeking more information on the scientific basis of climate change, risks to insurers, catastrophe modeling, public policy, liability, risk management and impacts on insurer investments.
